

PRELIMINARY PROGRAM

The Glasgow Caledonian University in collaboration with the European Federation of Soil and Water Bioengineering inside the ECOMED Erasmus + project , organize on September 7 and 8 the **International Symposium on Soil- and Water Bioengineering in a Changing Climate**

According to the E.F.I.B., **Soil- and Water Bioengineering** is a discipline that combines technology and biology, making use of plants and plant communities as building materials which can protect and stabilised the soil and as well as contributing to landscape development. It includes technical(Protection and stabilisation), ecological (ecosystem restoration), landscape (improvement of landscape integration),and a consideration of socio-economic (efficiency and employability) aspects. **ARE nature-based** construction systems that offer a very useful solutions in front to the climate challenges .

The symposium is **FREE** , but it`s necessary to complete the **REGISTRATION FORM** due to the limited capacity .

Registration is now open till September fst. _
